

Press release

Epigenomics AG Welcomes Reimbursement for Septin9 Testing by French Insurance Provider

Berlin, Germany, and U.S.A., December 12, 2013 - Epigenomics AG (Frankfurt Prime Standard: ECX, OTC: EPGNY), the German-American cancer molecular diagnostics company, today announced that MACSF (Mutuelle d'Assurance du Corps de Santé Français), the leading French supplementary insurance provider for the medical community, will provide the blood-based Septin9 test for the early detection of colorectal cancer (CRC) as part of their additional health insurance program. MACSF will reimburse EUR 50 on what its policy holders pay for undergoing Septin9 testing.

MACSF offers about 800.000 policy holders from the medical community and their families, such as doctors from the private and public sector, other medical or paramedical workers including medical students an additional health insurance, called "Mutuelle". After Swiss Life announced to provide Septin9 as part of its preventive health program in July 2012, MACSF is the second healthcare provider in France and the first "Mutuelle" to reimburse blood-based colorectal cancer screening.

Dr. Thomas Taapken, CEO/CFO of Epigenomics, commented: "We are extremely pleased to experience this growing support by French insurance providers. The fact that also MACSF now offers blood-based Septin9 tests to its customers shows the importance of an alternative convenient and non-invasive screening method. And, as their policy holders originate primarily from the medical community, we also hope to raise awareness and convince doctors of our Septin9-based test Epi proColon®, so that they increasingly recommend it to their patients".
